# LUCAS MOUGEOT

**Founding AI Systems Engineer | M.S. Materials Science | Specialist in Verifiable Agentic Workflows**
Boston, MA | (904) 304-2890 | lucas@lucasmougeot.ai | lucasmougeot.ai
US Citizen | Eligible for Secret/TS Security Clearance

## SUMMARY

Systems Engineer with an M.S. in Materials Science (NASA-funded) specializing in high-assurance AI infrastructure. Skilled in architecting deterministic RAG pipelines, agentic workflows, and verified code generation while bridging complex physical sensor data with production-grade backends. Proven 'Founding Engineer' track record building scalable ingestion engines and distributed systems that remain reliable under real-world and regulated constraints.

## EXPERIENCE

**Founding Systems Engineer — Stealth Platform** 2024 – Present

- Built and operate a production full-stack compliance platform (React, TypeScript, Python, PostgreSQL) supporting structured intake workflows, backend APIs, background processing, and rule-based evaluation services.
- Designed and implemented a deterministic Python codebase ingestion engine that compiles arbitrary repositories into immutable structural and dependency graphs using AST-based import analysis and state machines (orchestrated via LangGraph), enabling reproducible context compression and verified code translation workflows.
- Designed a deterministic ingestion engine for high-accuracy PDF/Image data extraction; implemented hybrid RAG pipelines (vector + full-text) with citation-anchored retrieval to eliminate hallucinations and ensure 100% auditability.
- Enforced schema-first workflow design to isolate probabilistic AI components behind deterministic validation layers inspired by formal verification, ensuring auditability, replayable state transitions, and dispute-grade traceability.
- Designed versioned legal knowledge graphs in PostgreSQL (ltree) with temporal validity windows and override chains to support historical reconstruction and regulatory auditability.
- Containerized multi-service architecture (Docker, PostgreSQL, Redis, BullMQ) and built regression, fuzz, and concurrency test suites to guarantee stable behavior under parallel workloads.

**Integration Engineer — EZ Systems (Full-Time)** Feb 2025 – Aug 2025

- Served as an R&D and systems integration engineer at the intersection of AI, robotics, AR/VR, and physical compliance constraints.
- Architected a unified QA and deployment framework integrating AI inference, sensor calibration, containerized services, and CI/CD pipelines, reducing pre-deployment validation time and ensuring reproducible system behavior.
- Developed robotic scan-path generation software from customer-provided STEP models, translating geometric requirements into executable motion plans.
- Led engineering for a self-driving mobile platform pilot operating in solar-field environments, addressing sensing reliability, deployment constraints, and safety validation.
- Authored technical strategy documents, including a federal grant proposal on explainable AI, internal R&D specifications, and company-wide AI integration guides.

**Graduate Researcher — Materials Science (NASA-Funded Capillary Devices)** 2023 – 2024

- Designed and fabricated porous ceramic devices enabling passive capillary transport in microgravity environments for space agriculture.
- Developed 36 ceramic formulations with controlled pore structure; executed iterative experiments to optimize capillary rise, stability, and manufacturability.
- Built MATLAB-based computer-vision and data analysis pipelines for pore segmentation, morphology quantification, and statistical ranking of candidate formulations.
- Characterized microstructure and composition using SEM/EDS; documented processing–structure–property relationships.

**Undergraduate Researcher — Computational Geometry (NSF-Funded)** 2020 – 2022

- Implemented bounded-degree planar graph constructions in modern C++ using CGAL under strict geometric constraints.
- Designed locality-preserving spatial algorithms for dense and heterogeneous point datasets.
- Contributed to peer-reviewed ACM Journal of Experimental Algorithmics publication.

## SELECTED PROJECTS

**Automated Lithium-Ion Battery Pack Assembler** Senior Design Capstone

- Designed and implemented an automated lithium-ion battery pack assembly system using an AutomationDirect Do-More PLC.
- Developed ladder logic coordinating motion sequencing, interlocks, fault handling, and safe state transitions.
- Integrated an RP Series robotic dispenser via RS-232 serial communication to initiate external job file execution.
- Implemented PWM-based servo motor control for precise positioning and timing.
- Delivered a deterministic, repeatable automation pipeline with full I/O mapping and bring-up procedures prior to generative AI tools.

## EDUCATION

**University of North Florida**

**M.S. Materials Science & Engineering (Thesis-Based)** — GPA: 4.00 / 4.00

- Thesis: Development and Characterization of Ceramic Devices for Capillary Action in Microgravity for the Purpose of Growing Vegetables in Space (NASA-Funded)
- Specialized in the characterization of physical sensing devices; deep experience with SEM/EDS and processing-structure-property relationships.

**B.S. Electrical Engineering** — GPA: 3.93 / 4.00

**B.A. Interdisciplinary Studies: Morphology of Futurism** — GPA: 4.00 / 4.00

Concentrations: Mechanical Engineering, Materials Science, Chemistry, Physics, Computing, Mathematics, Mandarin Chinese

## PUBLICATIONS & PRESENTATIONS

- Bounded-Degree Plane Geometric Spanners in Practice — Vol. 28 ACM Journal of Experimental Algorithmics (Peer-Reviewed), 2023
- Highly Sensitive and Stable pH Sensor Electrodes of TiN Fabricated Using HiPIMS with Kick — AVS 69 Poster, 2023
- Interactive Tool for Bounded-Degree Plane Geometric Spanners — SoCG Media Exposition, 2021

## TECHNICAL SKILLS

**Languages**: Python, TypeScript, JavaScript, SQL, C++

**Data & AI:** LLM Orchestration (LangChain/LlamaIndex), RAG, context engineering, prompt engineering, hallucination filtering, structured extraction (PDF/Vision), NLP, vector databases, LangGraph, state machines
**Frontend**: React, Next.js, TailwindCSS
**Infrastructure**: AWS (S3, Lambda, Bedrock), Docker, PostgreSQL, Redis, containerized service architectures, CI/CD pipelines, cloud deployments
**Data & Systems**: API design, background workers, data pipelines, distributed systems, computational geometry, static analysis, formal methods concepts
**Robotics & Sensors**: LiDAR integration, robotics motion planning, sensor calibration
**Tools**: GitHub Actions, Supabase, BullMQ, Playwright
